

Abhishek Patidar

(+91) 7879418884 • meabhishekpattidar@gmail.com • LinkedIn • Github

SKILLS

Languages & Frameworks: C++, C#, .NET MVC, RESTful APIs, Node.js, JavaScript (ES6+), React.js.
Cloud & DevOps: AWS (EC2), Docker, GitHub Actions, PM2, Linux basics.
Databases & Caching: SQL Server, MySQL, MongoDB, Redis, with basic exposure to PostgreSQL.
Tools & Security: Git, GitHub, GitLab, Postman, JWT Authentication, OAuth2, RBAC, API Rate Limiting, Performance Optimization, Indexing, Caching.

WORK EXPERIENCE

AJMS Global

September 2024 – March 2026

Associate Software Developer

Dubai/Remote

- Engineered **scalable, client-server architecture** for a **customer screening platform** using **ASP.NET Core**, supporting high-volume **API traffic** across multiple financial institutions.
- Designed **RESTful APIs** with robust **rate limiting** and **idempotency** to ensure **reliability, consistency**, and protection from abuse in **production environments**.
- Implemented **distributed caching** and **database indexing** strategies using **Redis** and **SQL Server** to reduce **API latency** and improve overall **system performance** by **40%**.
- Optimized cloud-hosted backend infrastructure on **AWS EC2** through **containerized deployments**, runtime configuration management, and scalable service orchestration.
- Built secure reusable **middleware** for **authentication, Role-based authorization**, validation, **exception handling**, and API monitoring.

Intern- Jr. Software Developer

March 2024 – August 2024

- Developed **RESTful API endpoints** in **ASP.NET Core** with SQL Server integration, supporting key features for internal applications.
- Integrated **React.js** frontend modules with **GraphQL** queries and **mutations** for efficient client-server data handling.
- Applied backend **design principles** including **layered architecture, repository pattern, dependency injection**, and modular service oriented development practices.

Jamitson Technologies

March 2022 – May 2022

Software Engineering Intern

Jaipur

- Developed and integrated **secure, scalable APIs** with proper validation, authentication, and error-handling mechanisms.
- Designed **notification and alerting workflows** leveraging **message queues and background workers**, ensuring reliable and timely delivery.
- Implemented **asynchronous processing pipelines** using **Redis queues**, increasing throughput and responsiveness under high load.
- Gained practical exposure to **RESTful API design, database optimization, caching strategies, and Agile development practices**.

EDUCATION

Poornima University
Bachelor of Technology in Computer Science and Engineering

2020-2024

PROJECTS

Distributed Rate Limiter System

Node.js | Express.js | Redis | Docker | REST APIs | Middleware | Sliding Window Algorithm

- Engineered a high-performance distributed rate limiting system using the **Sliding Window Algorithm** to efficiently **regulate API traffic** and mitigate abuse.
- Architected scalable **middleware-driven** request throttling with **Redis-backed in-memory** request tracking and automated **TTL-based** data expiration.
- Containerized Redis** with **Docker** to establish an isolated, production-aligned backend environment with optimized service orchestration.
- Developed resilient **RESTful APIs** featuring centralized request interception, **real-time validation**, and **HTTP 429-based** traffic control mechanisms.
- Deployed** the Dockerized backend application on **AWS EC2** to enable **scalable cloud-based hosting** and production-aligned distributed system execution.

Additional Experience and Awards

AWS Certified Developer – Associate
Actively practicing Data Structures and Algorithms on **LeetCode**
