SUMMARY

Full Stack Developer with 2+ years of hands-on experience shipping production APIs, distributed systems, and containerized cloud backends. Proven impact across enterprise environments — 40% performance gains, 99.9% uptime, zero-downtime deployments. AWS Certified. Strong in DSA and clean architecture.

SKILLS

Languages & Frameworks: C#, C++, ASP.NET Core, .NET MVC, Entity Framework Core, Node.js, React.js, JavaScript (ES6+), GraphQL.

Cloud & DevOps: AWS (EC2), Docker, GitHub Actions, CI/CD

Databases & Caching: SQL Server, MySQL, MongoDB, PostgreSQL, Redis.

Tools & Security: Git, GitHub/GitLab, Postman, Swagger, JWT, OAuth2, RBAC, xUnit.

WORK EXPERIENCE

AJMS Global

September 2024 – March 2026

Associate Software Developer

Dubai/Remote

- Engineered a scalable **client-server** screening platform using **ASP.NET Core**, serving 5+ financial institutions and handling high-volume API traffic of **10,000+ concurrent requests** with **zero reported downtime**.
- Designed production-grade **RESTful APIs** with **rate limiting** and **idempotency** across 15+ endpoints, achieving **99.9% uptime** and eliminating duplicate request failures in a multi-tenant environment.
- Implemented **distributed caching** and **database indexing** strategies using **Redis**, **Entity Framework Core**, and **SQL Server** to reduce API **latency** and improve overall **system performance** by **40%**.
- Optimized **AWS EC2** backend via **Dockerized** deployments and runtime configuration management, reducing deployment time by 35% and enabling **zero-downtime** releases across staging and production.
- Built a reusable **middleware pipeline** covering **JWT authentication**, **RBAC**, input validation, and **exception handling** — reducing boilerplate by 30%, standardizing security across all API routes, and achieving **85% unit test coverage** using **xUnit**.

Junior Software Developer

March 2024 – August 2024

- Developed and shipped 8+ **RESTful API** endpoints in ASP.NET Core with **SQL Server** integration, directly supporting 3 core features used by internal operations teams daily.
- Integrated **React.js** frontend modules with **GraphQL** queries and **mutations** for efficient client-server data handling.
- Applied **layered architecture**, **repository pattern**, and **dependency injection** to refactor a monolithic module into 4 decoupled service layers, improving testability and reducing code coupling.

Jamitson Technologies

March 2023 – May 2023

Software Engineering Intern

Jaipur

- Designed **notification and alerting workflows** leveraging **message queues** and **background workers**, ensuring reliable and timely delivery.
- Implemented **async** processing pipelines **using Redis queues**, increasing system throughput by 25% and reducing average response time under peak load from 180ms to 95ms.
- Contributed to RESTful API design and **database optimization** within an **Agile team**, delivering features across 3 sprint cycles and **improving query performance** through targeted **indexing** strategies.

EDUCATION

Poornima University

2020-2024

Bachelor of Technology in Computer Science and Engineering

PROJECTS

Distributed Rate Limiter System

Node.js | Express.js | Redis | Docker | AWS(EC2) | REST APIs | Middleware | Sliding Window Algorithm

- Engineered a distributed rate limiting system using the **Sliding Window Algorithm**, capable of processing 1,000+ requests/sec with sub-10ms latency, effectively throttling abusive traffic patterns.
- Architected scalable **middleware-driven** request throttling with **Redis-backed in-memory** request tracking and automated **TTL-based** data expiration.
- Developed resilient **RESTful APIs** with centralized request interception, **real-time validation**, and **HTTP 429-based traffic control**.

Additional Experience and Awards

AWS Certified Developer – Associate

Solved 250+ problems on **LeetCode** (90 Easy/ 120 Medium/40 Hard split)
